The Skillians, a leading edtech platform founded by Chaitanya Sharma in 2021, is revolutionizing the way technology education is delivered in India. Focused on future forward domains like Artificial Intelligence, Machine Learning, Data Science, and Neural Networks, The Skillians is on a mission to close the widening skill gap left by outdated college curriculums.

Chaitanya Sharma, the visionary behind the platform, makes a bold but honest statement: The Skillians wouldn't exist if B.Tech colleges were actually doing their job.

According to Sharma, traditional engineering institutions in India have become more of a year vacation spot than a place for genuine learning. Lakhs of rupees are spent, but most students graduate without the practical skills required to survive in the tech industry.

The Skillians is here to change that

From learning to earning, Skillians has your back — Pay After Placement made real.

By introducing a “Pay After Placement” model, the platform offers students an opportunity to learn high-demand tech skills without upfront financial burden. Students only pay once they land a job—proving The Skillians’ commitment to outcome driven education. Its not about degrees, it’s about deliverables. You learn. You get placed. Then you pay.

This approach not only supports students financially but also instills a belief in accountability, performance, and real-world readiness—something Indian colleges have failed to offer for decades.

The Skillians isn't just another edtech company. It's a rebellion against the broken education system. And it's working.
